

Dear resident,

As part of our health management efforts, we are carefully monitoring the possible effects of the coronavirus to ensure as much safety as possible for both residents and workers during installation work. All workers have been notified in advance of the hygiene measures that they should follow (distance from other people, coughing and sneezing etiquette, proper hand hygiene). Additionally, the proper course of conduct has been agreed with all workers in the event of illness or suspected infection. As an additional preventive measure, workers also have protective equipment. The protective measures in place for installation work are described below. If you have any further questions, please contact the site manager directly.

Description of protective measures for the installation of fibre optic network in properties owned by the SAGA group	
	Workers will wash their hands thoroughly and regularly.
	Workers will ensure that the minimum distance (1.5 m) from you is observed.
	If you ask them to, workers can wear a permanent protective mask.
	If you ask them to, workers can wear additional protective gloves.
	If you ask them to, workers can wear overshoe protection.
	If you ask them to, workers can disinfect their hands again before entering your apartment.
